

# JS Training

---

## Who?

---

### David Almeida (Soyun)

Me. I'm a guy who thinks he knows JS.

[david.almeida@soyun.es](mailto:david.almeida@soyun.es)

---

## Why?

---

There are many ways to code in javascript.

---

Many of them are WRONG!

---

Knowing how to cut tomatoes, turn on the oven, make a tortilla does not mean you are a good cook ...

You just know stuff.

---

Knowing to loop, to use functions or to create objects does not mean you are a good JS developer...

You just know stuff.

---

You don't know JS. But you don't know it yet.

---

## How ?

---

A few steps

---

**1. Fail the exam** or leave the room

---

**2. Attend classes:** listen, ask, and ask again

---

**3. Do your homework** with the refactor project

- Repo: <https://github.com/soyundev/js-training-practice>
  - Deadline: Send your pull request before wednesday
- 

**4. Pass the exam** or blame you... and me.

---

“Those who are not aware they are walking in darkness will never seek the light.”

~ Bruce Lee

---

Here comes the light !

---

## Are you ready?

---
